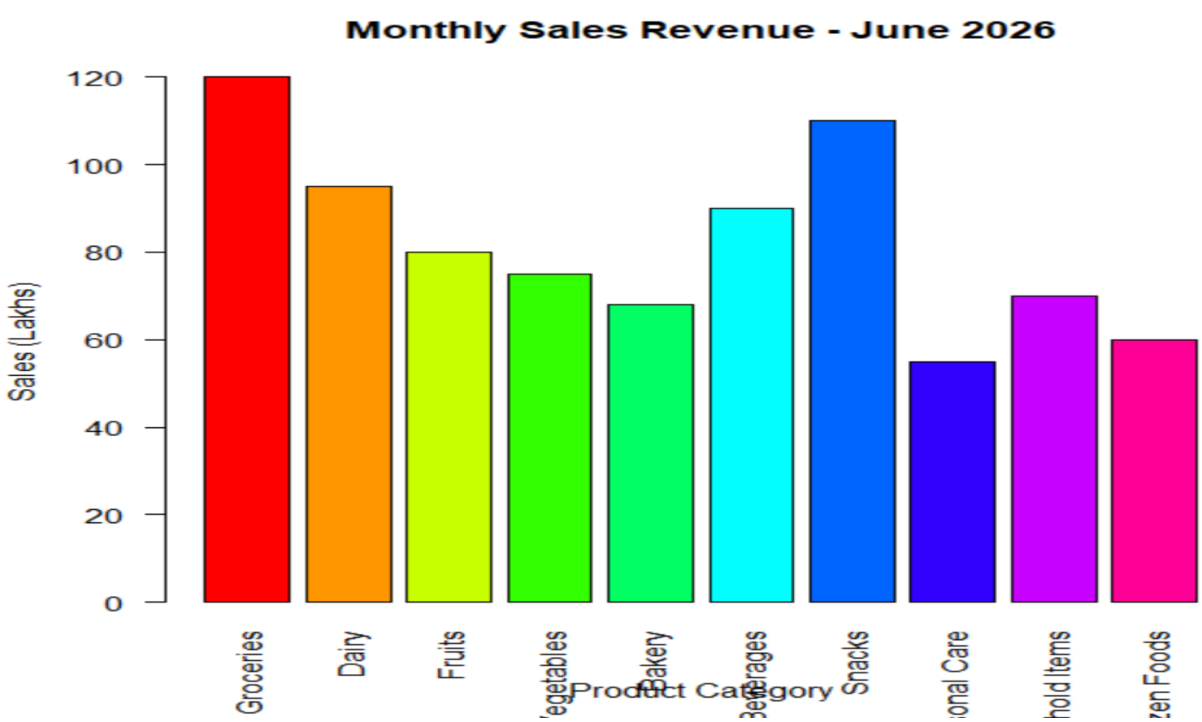
Question 1:

```r
category <- c("Groceries","Dairy","Fruits","Vegetables",
              "Bakery","Beverages","Snacks",
              "Personal Care","Household Items","Frozen Foods")
sales <- c(120,95,80,75,68,90,110,55,70,60)
barplot(sales,
        names.arg=category,
        col=rainbow(10),
        las=2,
        main="Monthly Sales Revenue - June 2026",
        xlab="Product Category",
        ylab="Sales (Lakhs)")
highest <- category[which.max(sales)]
lowest <- category[which.min(sales)]
cat("Highest Selling Category:", highest, "\n")
cat("Lowest Selling Category:", lowest, "\n")
```

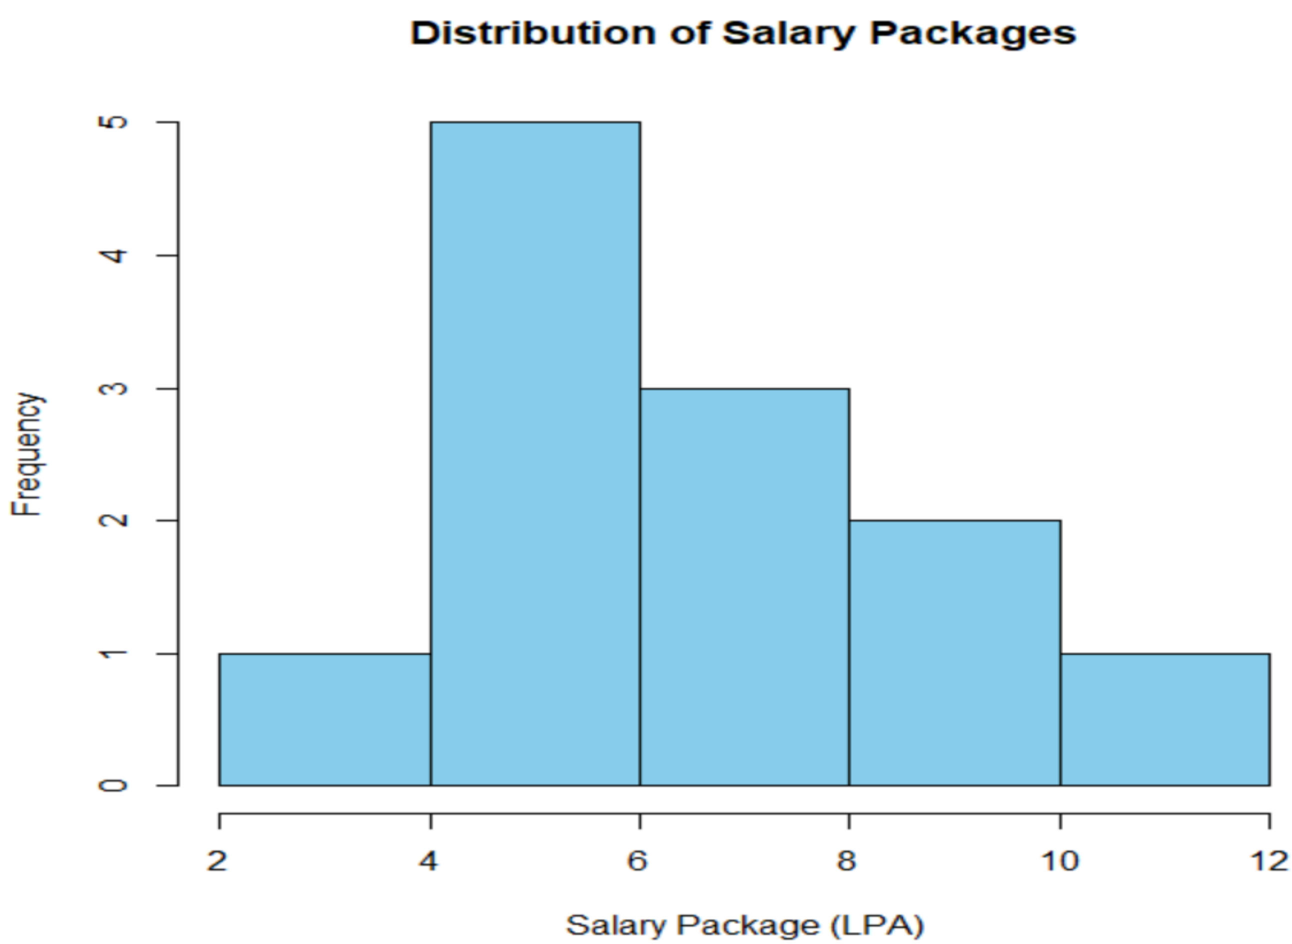
OUTPUT:



2.QUESTION:

```
salary <- c(3.2,4.5,5.0,6.8,7.2,8.5,4.8,5.5,6.0,7.8,9.2,10.5)
hist(salary,
     breaks=5,
     col="skyblue",
     main="Distribution of Salary Packages",
     xlab="Salary Package (LPA)",
     ylab="Frequency")
```

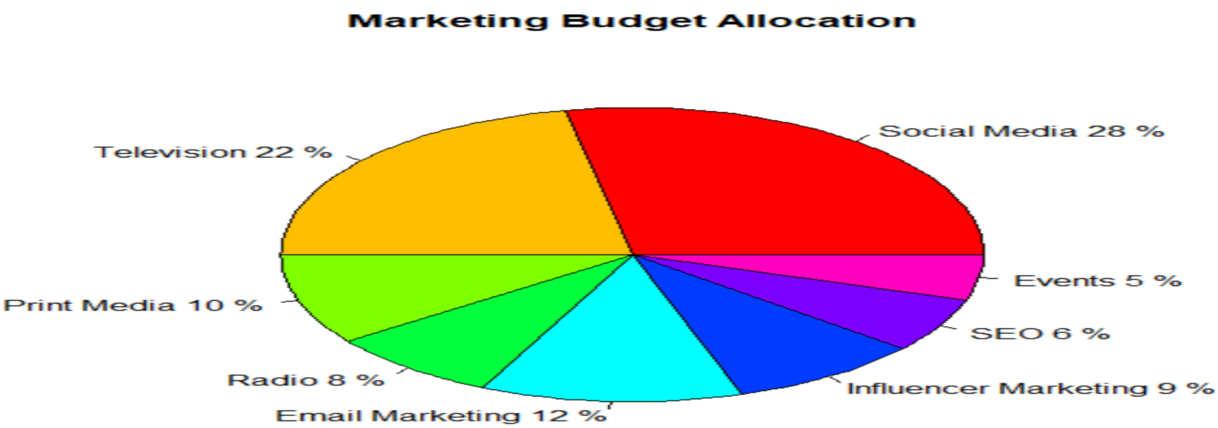
OUTPUT:



3.QUESTION:

```
channel <- c("Social Media","Television","Print Media",
             "Radio","Email Marketing",
             "Influencer Marketing","SEO","Events")
budget <- c(28,22,10,8,12,9,6,5)
pie(budget,
    labels=paste(channel,budget,"%"),
    col=rainbow(8),
    main="Marketing Budget Allocation")
highest <- channel[which.max(budget)]
cat("Highest Investment:", highest)
```

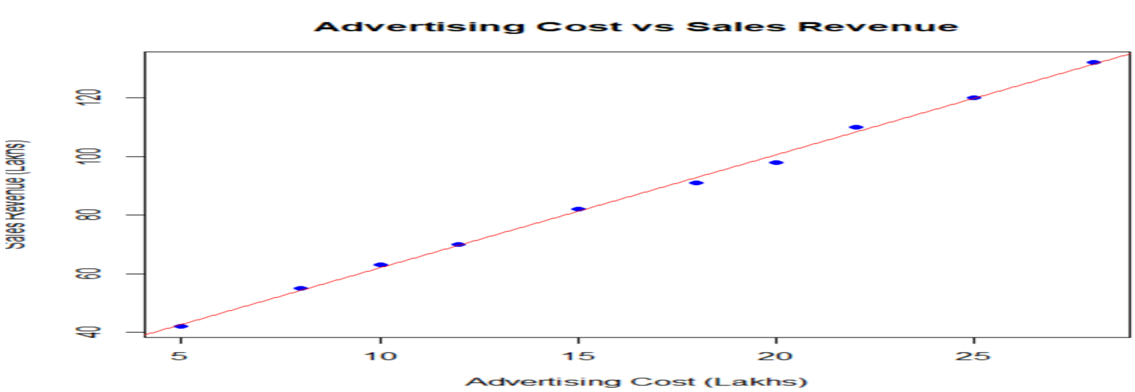
OUTPUT:



4.QUESTION:

```
advertising <- c(5,8,10,12,15,18,20,22,25,28)
sales <- c(42,55,63,70,82,91,98,110,120,132)
plot(advertising,
     sales,
     pch=19,
     col="blue",
     main="Advertising Cost vs Sales Revenue",
     xlab="Advertising Cost (Lakhs)",
     ylab="Sales Revenue (Lakhs)")
abline(lm(sales~advertising),col="red")
```

OUTPUT:



5.QUESTION:

```
months <- c("Jan","Feb","Mar","Apr","May","Jun",
            "Jul","Aug","Sep","Oct","Nov","Dec")
energy <- c(420,450,490,530,560,600,580,590,610,630,590,540)
plot(1:12, energy,
     type="o",
     col="blue",
     lwd=2,
     pch=16,
     xaxt="n",
